Should You Monitor Your Network?

Have you ever wondered how your Business IT infrastructure is running?

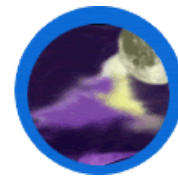

Would you like to know immediately should there be a problem with your network any time of the day **BEFORE** it costs your Business precious down time?

Would you like to minimise or avoid any costly down time of your business critical services that rely on your IT Infrastructure?

Would you like a more efficient response and fix from a helpdesk service that is notified of any problems with your network when it happens, even before it affects you Business staff?

Take a Pro-Active Approach.... Have Your Network Monitored.

Kiss IT can offer you a pro-active approach to maintaining your network and streamline a helpdesk process by actively monitoring your network, servers and business critical services. Alerts can be configured by e-mail, pager, sms directly to our helpdesk.

Servers Alive

Benefits of a Network Monitoring Program

- Piece of mind that you network is performing well.
- Fast and reliable response should a problem occur with your network.
- Minimise or Avoid costly down time of your network.
- Maintain reliability of your Business Systems.

Servers Alive

KISS IT PROTECTS

The “Servers Alive” Monitoring Solution

Kiss IT have partnered with Woodstone bvba to deliver the “Servers Alive” monitoring solution. Servers Alive is an end-to-end network monitoring tool. It works agentless and across different operating system platforms.

Extensive Monitoring

High Monitoring Performance without the High Price tag. Configure checks such as: Check server status, check critical business applications and other operating systems services are running, check disk capacity and CPU % thresholds, monitor databases, check other network devices are running; or write custom checks against events such as Server Event Logs.

Flexible Alerting Engine

Designed for Real Time Alerting via a variety of options such as: SMTP, SMS, Pager, Instant Messaging via ICQ or MSN, Popup Messaging.

The alerting engine allows you to automatically configure what actions to be done such as: Restart a Critical Service, Reboot a Server, Run a command, Post Data to a website.

The alerting engine allows you to configure alerting rules such as:

The frequency of sending alerts, schedule alerts based on time of day, specify people or teams to send specific alerts to.

Control Output of Events / Reporting

Real Time Events can be configured to be published onto a HTML Web Page or via WAP. HTML Web pages can be customised via a variety of templates.

Historical information can be logged and charted with Graphs to indicate behaviours and trends of your network.

You Need Network Monitoring?

Simply contact our Sales Team at Kiss IT to discuss tailoring a Network Monitoring Solution for your Business.
